Q&A

Introduction

ABAP Cloud – One development model for SAP S/4HANA and SAP BTP

| SAP S/4HANA any premise [1] | SAP S/4HANA Cloud Private Edition [1] | SAP S/4HANA Cloud Public Edition [2] | SAP BTP, ABAP Environment |

ABAP Cloud development model
to build cloud-ready business apps, services, and extensions
that complies with the clean core principles

ABAP

Classic ABAP development model

[1] SAP S/4HANA any premise or SAP S/4HANA Cloud Private Edition release ≥ 2022
[2] SAP S/4HANA Cloud Public Edition release ≥ 2208, 3-system landscape required

ABAP Cloud – Supported scenarios

Business Events Consumption

OData Service Consumption

SAP Fiori Launchpad
SAP Fiori app based on OData (e.g. via SAP Fiori elements)

Process integration[1]
Integration services for remote communication

Point-to-point via OData or event-driven

Enterprise Search

★ **SAP Fiori app**

SAP Fiori Notifications[2]

+ **ABAP Push Channels[2]**

★ **Business Events Exposure**

OData Service Exposure

Analytics

InA-based advanced analytics

System locally via SAP Fiori based multi-dimensional reporting

Externally via SAC

Multi-dimensional reporting

SAP Analytics Cloud (SAC)

ABAP

RAP BO Interface

Consumption via EML and services
Very useful for on-stack extensibility

★ **Local Events**

Event handler for RAP BO events
Asynchronous execution

Data integration

SQL-based replication with ABAP as data source

SQL based replication

★ **CDS entities / RAP Business Object**

Background Processing Framework (bgPF)

Asynchronous post-processing in background

Legend
 - RAP : ABAP RESTful application programming model
 - CDS : Core data services
 - BO : Business object
 - InA : SAP Information Access protocol

[1] HTTP, SOAP etc. are also part of ABAP Cloud

[2] This presentation and SAP's strategy and possible future developments are subject to change and may be changed by SAP at any time for any reason without notice.   5

SAP Build: Generative AI-powered business application development & automation on SAP BTP

SAP Build

### Fusion Team Development

Apps and Extensions

Pro Code
SAP Build Code
⭐ New **ABAP Environments** (SAP S/4HANA, SAP BTP)

Low Code

Business AI Capabilities

Joule
Generative AI-based development, optimized for business application development

Pre-built Solutions

120+ Finance | 40+ HCM | 115+ Supply Chain & Procurement | 225+ Other
Line of business pre-built solutions

Deep Integration with Business Applications

| Cloud ERP | HR | Finance | Supply Chain | CX |

Main use cases for GenAI in ABAP

Accelerate

Creation of ABAP Cloud apps
and services including unit tests

Transform

Classic ABAP to ABAP Cloud
Empower

Developers to infuse AI
into business scenarios

Accelerate: Joule's ABAP developer capabilities *

Increase development efficiency by leveraging GenAI assistance in the ABAP Development Tools

- Generation of RAP business objects and services
- Code prediction
- Code explanation
- Unit test generation for ABAP classes and CDS views

⭐ Session's focus

Example: Generation RAP business objects and services

Today's scenario – Overview

Block A – Build a transactional SAP Fiori app with RAP
with search, filter and draft capabilities, and business events

Some of the used features:
- ❖ AI-based generation of read-only UI services
- ❖ Freestyle fuzzy search
- ❖ Filter bar
- ❖ Data hierarchy definition
- ❖ Read-only hierarchical treeview in SAP Fiori app

Today's scenario – Exercises

The AD180 hands-on exercises

Create a free SAP BTP ABAP Environment trial user (see Tutorial) – connected to SAP AI Core **only** during the SAP TechEd Virtual 2024 week

Set up your ABAP Development Tools for Eclipse (see Tutorial)

Create an ABAP cloud project to connect ADT to the ABAP environment (see Tutorial)

BLOCK A

01 Generate a transactional OData UI Service E2E with Joule's ABAP developer capabilities

02 Enhance the RAP BO behavior with a business event and consume it locally

03 Play around with the AI-based ADT Wizard

BLOCK B

04 Generate a read-only OData UI service with Joule's ABAP Developer capabilities

05 Implement the read-only treeview for hierarchical data display

---

OPTIONAL

06 Create an SAP Fiori elements app with SAP Business Application Studio and deploy it to the ABAP Environment

---

Wrap up

Key takeaways

ABAP Cloud is the development model provided for building cloud-ready enterprise services, apps, and extensions on SAP BTP ABAP Environment and all editions of SAP S/4HANA[1], in the cloud and on-premise.

Development that is done with ABAP Cloud adheres to the **clean core principles**.

The **ABAP Cloud feature set** is enhanced **quarterly** in SAP BTP ABAP Environment, **twice a year** in SAP S/4HANA Cloud Public Edition, and **every two years** in SAP S/4HANA and SAP S/4HANA Cloud Private Edition[1] as of release 2023.

Check out the ABAP Cloud Release Notes and the ABAP Cloud Roadmap Information.

The introduction of **generative AI in ABAP**[2] will help **accelerate** the development processes, **improve** the transformation of existing custom code, and **empower** developer to easily infuse AI into ABAP-based business scenarios. Check out the SAP Road Map Explorer for more details.

[1] SAP S/4HANA any premise or and SAP S/4HANA Cloud Private Edition release ≥ 2022
   SAP S/4HANA Cloud Public Edition release ≥ 2208, 3-system landscape required

[2] This presentation and SAP's strategy and possible future developments are subject to change and may be changed by SAP at any time for any reason without notice.
